Homography

$$x' = \lambda H x$$

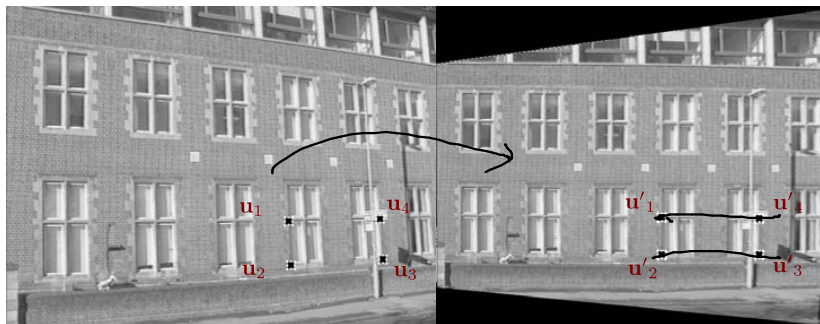

known

Examples of Homography

Computing Homography

$$\mathbf{u}_1 = [100, 98, 1]^\top$$

$$\mathbf{u}_3 = [107, 90, 1]^\top$$

$$\mathbf{u}'_1 = [100, 98, 1]^\top$$

$$\mathbf{u}'_3 = [107, 98, 1]^\top$$

$$\mathbf{u}_2 = [102, 95, 1]^\top$$

$$\mathbf{u}_4 = [110, 85, 1]^\top$$

$$\mathbf{u}'_2 = [102, 95, 1]^\top$$

$$\mathbf{u}'_4 = [110, 95, 1]^\top$$

Find H such that $\mathbf{u}' = \lambda H \mathbf{u}$ for any point on one image to another image, where $\mathbf{u}', \mathbf{u} \in \mathbb{P}^2$

2D homography

Given a set of points $\underline{u}_i \in \mathbb{P}^2$ and a corresponding set of points $\underline{u}'_i \in \mathbb{P}^2$, compute the projective transformation that takes each \underline{u}_i to \underline{u}'_i . In a practical situation, the points \underline{u}_i and \underline{u}'_i are points in two images (or the same image), each image being considered as a projective plane \mathbb{P}^2 .

$$\underline{u}'_i = \lambda H \underline{u}_i \quad \longrightarrow \quad A \underline{x} = \underline{b}$$

Perspective space

$\lambda \in \mathbb{R}$

$\underline{u} = K X$ in perspective space

$$\underline{u} = \lambda K X$$

$$\begin{bmatrix} a & b & c \end{bmatrix} \begin{bmatrix} x \\ y \\ 1 \end{bmatrix} = 0 \quad ax + by + c = 0$$

$$\begin{bmatrix} 1 \\ 2 \\ 3 \end{bmatrix} = \begin{bmatrix} 4 \\ 8 \\ 12 \end{bmatrix}$$

Perspective space

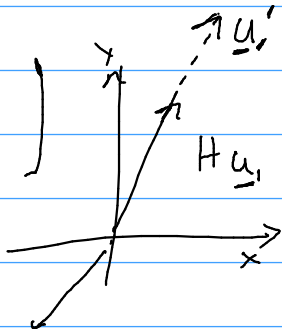

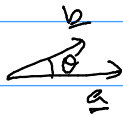

$$\underline{u}_i' \in \mathbb{P}^2 = \begin{bmatrix} x_i' \\ y_i' \\ w_i' \end{bmatrix}$$

$$H = \begin{bmatrix} h_1 & h_2 & h_3 \\ h_4 & h_5 & h_6 \\ h_7 & h_8 & h_9 \end{bmatrix}$$

$$\underline{u}_i \in \mathbb{P}^2 = \begin{bmatrix} x_i \\ y_i \\ w_i \end{bmatrix}$$

$$\underline{u}_i = \lambda H \underline{u}_i = \begin{bmatrix} \\ \\ \end{bmatrix}$$

$$\underline{u}_i \times H \underline{u}_i = \begin{bmatrix} 0 \\ 0 \\ 0 \end{bmatrix}$$

$$|\underline{a} \times \underline{b}| = \|\underline{a}\| \|\underline{b}\| \sin \theta$$

If $\underline{a} \parallel \underline{b}$ then $\underline{a} \times \underline{b} = \underline{0}$

$$\underline{u}_i' = \lambda H \underline{u}_i$$

$$\begin{bmatrix} x_i' \\ y_i' \\ w_i' \end{bmatrix} = \lambda \begin{bmatrix} h_1 & h_2 & h_3 \\ h_4 & h_5 & h_6 \\ h_7 & h_8 & h_9 \end{bmatrix} \begin{bmatrix} x_i \\ y_i \\ w_i \end{bmatrix}$$

$$\begin{matrix} x_i' \\ \uparrow \end{matrix} = \underbrace{\lambda h_1}_{\uparrow} x_i + \underbrace{\lambda h_2}_{\uparrow} y_i + \underbrace{\lambda h_3}_{\uparrow} w_i$$

Quadratic
↳ x^2, y^2, xy ← unknown

Cubic
↳ x^3, x^2y, y^3, z^3 ←

$$\underline{u}_i^T H \underline{u}_i = 0$$

$$\begin{bmatrix} 0 & -w_i^T & y_i^T \\ w_i^T & 0 & -x_i^T \\ -y_i^T & x_i^T & 0 \end{bmatrix} H \underline{u}_i = 0$$

cross product matrix

$$\underline{a} \times \underline{b}$$

$$= \begin{bmatrix} 0 & -a_3 & a_2 \\ a_3 & 0 & -a_1 \\ -a_2 & a_1 & 0 \end{bmatrix} \begin{bmatrix} b_1 \\ b_2 \\ b_3 \end{bmatrix}$$

$$\begin{bmatrix} 0 & -w_i' & y_i' \\ w_i' & 0 & -x_i' \\ -y_i' & x_i' & 0 \end{bmatrix} H u_i = 0$$

$$H = \begin{bmatrix} h_1^T \\ h_2^T \\ h_3^T \end{bmatrix} .$$

$$\underline{h}_i^T = [h_1 \quad h_2 \quad h_3]$$

$$H \underline{u}_i^0 = \begin{bmatrix} \underline{h}_1^T \\ \underline{h}_2^T \\ \underline{h}_3^T \end{bmatrix} \underline{u}_i^0$$

$$= \begin{bmatrix} \underline{h}_1^T \underline{u}_i^0 \\ \underline{h}_2^T \underline{u}_i^0 \\ \underline{h}_3^T \underline{u}_i^0 \end{bmatrix}$$

$$\begin{bmatrix} 0 & -w_i' & y_i' \\ w_i' & 0 & -x_i' \\ -y_i' & x_i' & 0 \end{bmatrix} H u_i = \begin{bmatrix} 0 \\ 0 \\ 0 \end{bmatrix}$$

$$= \begin{bmatrix} 0 & -w_i' & y_i' \\ w_i' & 0 & -x_i' \\ -y_i' & x_i' & 0 \end{bmatrix} \begin{bmatrix} \underline{u}_i^T h_1 \\ \underline{u}_i^T h_2 \\ \underline{u}_i^T h_3 \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \\ 0 \end{bmatrix}$$

$$= \begin{bmatrix} 0 - w_i' \underline{u}_i^T h_2 + y_i' \underline{u}_i^T h_3 \\ w_i' \underline{u}_i^T h_1 + 0 - x_i' \underline{u}_i^T h_3 \\ -y_i' \underline{u}_i^T h_1 + x_i' \underline{u}_i^T h_2 + 0 \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \\ 0 \end{bmatrix}$$

$$\begin{bmatrix}

Solving for Homography

$$\underbrace{\text{Seqm}}_A \begin{pmatrix} \vdots \\ \vdots \\ \vdots \end{pmatrix} = \begin{pmatrix} h_1 \\ h_2 \\ h_3 \\ \vdots \\ 0 \end{pmatrix} = 0$$

The diagram shows a system of linear equations for solving a homography. On the left, a vertical double-headed arrow labeled "Seqm" indicates a sequence of equations. Below it, a horizontal curly brace labeled "A" spans the width of the system. To the right, a vertical column vector contains elements h_1 , h_2 , h_3 , followed by three vertical dots, and then 0. Below this vector is a horizontal curly brace labeled "x", and below that is an equals sign followed by a 0.

Solving for Homography

$$A \underline{x} = 0 \quad \left. \vphantom{A \underline{x} = 0} \right\} \text{Nullspace}$$

$$A_{8 \times 9}$$

$$\text{rank}(A) = 8$$

$$A = U \Sigma V^T$$

$8 \times 9 \quad 8 \times 8 \quad 8 \times 9 \quad 9 \times 9$

$$U \in \mathbb{R}^{8 \times 8}$$

$$V \in \mathbb{R}^{9 \times 9}$$

$$V = \begin{bmatrix} \underline{v_1} & \dots & \underline{v_9} \end{bmatrix}$$

$$N(A) = \underline{v_9} = \begin{bmatrix} h_1 \\ \vdots \\ h_2 \\ \vdots \\ h_3 \end{bmatrix}$$

$$H = \begin{bmatrix} h_1^T \\ \vdots \\ h_2^T \\ \vdots \\ h_3^T \end{bmatrix}$$
